

ADITHYA PISUPATI

+91 9346141575 | Ganeshkarthik365@gmail.com | Hyderabad, India.

PROFESSIONAL SUMMARY

Computer Science graduate with a strong foundation in Python, Java, and SQL, with hands-on experience building and deploying software applications. Quick learner with a problem-solving mindset, eager to collaborate with senior engineers and contribute to innovative products. Passionate about leveraging technology to build scalable and reliable solutions.

SKILLS

AI / LLM	Prompt Engineering, LLM Evaluation, Generative AI, Copilot, NLP.
Programming	Python, Java, SQL, JavaScript.
AI Tools	Claude, Cursor, LLaMA (Groq).
Quality & Testing	Test Plan Design, Automation, Bug Filing, Equivalence Class Analysis, Edge-Case Identification.
Data & BI	Oracle Analytics Cloud (OAC), Power BI, Data Visualization, Dashboard Development.
Methodologies	Scrum/Agile, Software Development Lifecycle (SDLC), Configuration Management.

EDUCATION

B.E. in Computer Science & Engineering (AI & ML) | *Neil Gogte Institute of Technology* 2021 – 2025

CERTIFICATIONS

- Oracle Generative AI Professional
- Oracle Cloud Infrastructure Foundations Associate
- Oracle Analytics Cloud Professional

PROJECTS & EXPERIENCE

AI-Powered Negotiation Bot

Tech: Python, Flask, Groq LLaMA, TextBlob, Speech Recognition, Prompt Engineering

- Designed and engineered an LLM-powered conversational agent capable of real-time sentiment detection and dynamic response generation — directly aligned with building AI-assisted tools using large language models.
- Developed and optimized prompt strategies and agent workflows to handle complex negotiation scenarios, improving response relevance and accuracy.
- Implemented qualitative evaluation of model responses by testing edge cases, detecting bias, and iterating on prompts to reduce hallucinations and irrelevant outputs.
- Integrated Generative AI capabilities into a Flask API backend, demonstrating ability to connect AI into existing platform APIs.

Real-Time Face Recognition for Automated Attendance

Tech: Python, OpenCV, FaceNet, Haar Cascade Classifier, SQL

- Built an end-to-end AI system with rigorous validation: designed test cases to verify recognition accuracy across varied lighting, angles, and user populations — applying customer-impact-driven test prioritization.
- Used one-shot learning to improve system scalability; performed benchmarking and comparative evaluation of model performance.
- Managed SQL-backed data pipelines and wrote queries to track attendance records — demonstrating database fundamentals required for the role.
- Documented test plans and results, establishing benchmarks for detection precision and recall.

Web Application for Phishing Detection

Tech: Python, Streamlit, Scikit-learn, Random Forest, URL Feature Extraction

- Designed and executed a structured test plan: collected datasets, performed EDA, validated model outputs for accuracy and edge-case reliability — mirroring AI evaluation frameworks expected in the role.
- Built automated evaluation pipelines to benchmark Random Forest classifier performance, including false positive/negative analysis for safety-critical outputs.
- Deployed an interactive Streamlit interface enabling real-time detection, demonstrating ability to integrate AI into user-facing tools.

Custom Object Detection System

Tech: Python, YOLOv8, OpenCV, Tkbootstrap, Prompt Engineering

- Developed a real-time object detection system using YOLOv8; applied prompt engineering principles to configure detection thresholds and model behaviour.
- Integrated the AI model with a GUI application, practicing end-to-end AI tool development from model to usable interface.
- Implemented guardrail-like constraints (confidence thresholds, fallback behaviour) to ensure reliable AI-generated outputs — mirroring production AI reliability requirements.
